NORMALIZATION METHODNormalized Score for each candidate (X_n)

Below is the formula that is used in the calculation of the normalized scores of the multisession papers.

$$X_n = \frac{S_2}{S_1} * (X - X_{av}) + Y_{av}$$

S2	Is the Standard Deviation of the shift with the Highest Average Score taken as base for normalization
S1	Standard Deviation for the corresponding shift (to be scaled to S2)
X	Raw score of a candidate
Xav	Simple average of the candidate Shift
Yav	Average corresponding to shift with highest Average (taken as base for normalization)
